

COVID-19 Back to School

Considerations and tips for parents and caregivers

With September quickly approaching, back-to-school preparation previously signaled a time of renewal and change, exciting students as they prepared for the highly anticipated school year. In 2020, that excitement has been coupled with anxiety and in some instances fear for both student and parents given the new realities of COVID-19 and our collective attempts to limit the spread and risk of infection, while addressing the needs of continued education in safe and productive environments.

As school boards across the country prepare for a return to in-person instruction at elementary, high school and post-secondary levels, a number of safety protocols are being reviewed with some measures yet to be finalized. Although physical distancing and face masks are being recommended for students, teachers and support staff, regional and provincial considerations and variances exist.

For some, wearing a mask may be strange or even a little scary. How can parents help kids wear a mask?¹

- Help kids get used to masks. Give children time to practice wearing their masks before they need to wear one outside the home. Teach them how to put them on and take them off.
- Encourage kids to decorate their mask. This may invoke a sense of ownership and control over the situation. A personal touch can help make it more of a normal part of

their routine, and make it more likely they'll want to wear their mask. Avoid stitching to maintain mask integrity.

- Make them together. If you make masks or cloth face coverings at home, let older kids help you.
- Help make it fun. With younger kids, introduce a sense of play. Kids can pretend to be a doctor or nurse while wearing their masks.
- Have a few masks handy while kids play. This lets them use their imagination about how to use them during playtime. It also helps make masks a more normal part of their everyday world. You can ask your child to put a mask on a stuffed animal, and then ask follow-up questions about why the stuffed animal is wearing the mask. Depending on your child's response, you can clear up any confusion and offer reassurance.

Throughout the country different boards have adopted varying policies with respect to attendance and in-person schooling including, full-time in-person attendance, fully remote or online classes, and a blended approach combining multiple adaptations of both in-person and remote or online learning. These options combined with the initial apprehension of sending children back to school, our ability to assume the role of primary educator, the complexities of scheduling and professional obligations make an already difficult decision more challenging.

COVID-19 Back to School

Benefits and risks of in-person schooling

Benefits:

- For younger children, the opportunity for social interaction and development, and life experience beyond the home
- For adolescents, social interaction and peer motivation
- For parents, financial relief with the removal of unexpected childcare expenses

Risks:

- Potential medical risks for children and families with pre-existing conditions
- Are you confident of the plans and procedures put in place by your school board

Benefits and risks of remote/online schooling

Benefits:

- Reduced exposure to COVID-19
- Dependent upon personality and age, some may more easily understand learning concepts and objectives

Risks:

- Requires significant parental involvement with younger children
- Reduced social interaction

In preparation for the 2020/2021 school year, boards are working to enhance both the in-person and online learning experience, while adopting and modifying protocols to minimize the risk of spreading COVID-19. Each approach may differ slightly based on the prevalence of infection within the community, the availability of well-ventilated space for in-person classes, the ability to lower class sizes, and the unique requirements to support younger, older and children with special learning needs. Education planners must also consider the needs of teachers and all support staff within these facilities.

As an alternative to traditional learning, the concept of Learning Pods, are growing in popularity. A learning pod is comprised of a group of parents who share time and pool resources to offer home-schooling or to supplemental online/remote learning. Pods may be customized to meet a collective need or preference with some offering online instruction, while others offer in-person instruction. The pod may hire teachers or tutors or teaching responsibilities may

be shared among the parents. If you're considering a learning pod solution, it's imperative you understand the financial and time commitments as well as having realistic expectations for the learning experience.

Here are a few ways in which schools are responding to COVID-19:

- **Masks or face coverings**
Many jurisdictions have mandated the use of protective face covering for adults and students, with minor exceptions for primary school students and those with pre-existing medical conditions
- **Handwashing**
Students and adults should wash hands frequently or apply hand sanitizer, some schools have installed foot-operated sanitization stations
- **Physical distancing**
Desks and/or work stations should be spaced at least six feet apart and the flow of foot traffic at entrances and in hallways should be controlled to ensure adequate distancing
- **Ventilation**
For indoor classes, the risk of spread can be reduced by opening windows and by increasing the flow of fresh air into the room with mechanical ventilation
- **Cleaning and disinfecting**
Common and high use surfaces should be cleaned frequently, including bathrooms, door handles, drinking fountains, and playground equipment
- **Limiting student interactions**
Some schools may group students into small pods where students learn and break together with no or limited interaction with other students. Additionally, students remain in a dedicated space where teachers move to the students for different subjects

COVID-19 Back to School

- Transportation and staggered schedules
The implementation of physical distancing, ventilation, and seat disinfection for school, and the adoption of staggered schedules to limit interactions

Each family is unique

For many families, there is no clear decision about their child's schooling during the pandemic. The decisions you make around the coming school year will be difficult. Given the new realities, we may face feelings of worry, guilt, and potentially fear as we contemplate options. What solution is best for your child? What are the medical risks for both child and the family unit? Many parents feel overwhelmed by these questions, however it's important to note, many of us have lived through challenging and traumatic times becoming stronger and more resilient as we define and manage the priorities in our lives. Remember, we all react differently to stressful situations. Given our diverse backgrounds and the communities we live in, our beliefs and behaviours may vary.

Stressful reactions during the pandemic may include, but are not limited to:²

- Fear and concern for our health and the health of those you care about
- Changes in sleeping and/or eating patterns
- Difficulty sleeping and/or concentrating
- Worsening of chronic health problems
- Increased use of alcohol, tobacco, or other drugs

Finding work-life balance

Many families have now experienced some form of pandemic parenting, with unexpected disruptions during our daily routines and the assumption of primary educator for our children. Students and parents will need to expect the unexpected throughout the coming school year, including potential closures or quarantine should a region or school encounter a resurgence of cases. We may face uncertainties and evolving needs to balance the demands of our professional lives including implications to our available working hours and environments.

When exploring flexible work options there are numerous considerations, what flexibility or shifts are available to you

from your employer? Is it possible for you to work at different times or on different days? Once you've considered your scheduling needs and constraints, you can investigate flexible scheduling options with your employer where applicable. Prepare yourself for a conversation with your manager as needed. Be open to modifications and compromises ensuring a mutually beneficial solution for both you and your employer.

Most importantly, take care of yourself. The pandemic has brought new worries and uncertainties and higher levels of stress to our everyday lives. Pay attention to the stress in your life and take the necessary steps to ensure you remain healthy both physically and mentally.

How to stay productive and motivated:

- Mental health and wellness: If you start to feel overwhelmed or isolated, remain active and engaged with your personal and professional support networks. Take mental health breaks, take care of your body, take deep breaths, stretch, or meditate when possible and ensure you're getting plenty of sleep.
- Eating and hydration: Try to maintain healthy eating patterns and stay hydrated. Avoid high sugar snacks and beverages to avoid swings in mood and energy levels.
- Create a dedicated space for work: Select an area of your home that provides you with a suitable workspace, think about surface space and room to stretch. Avoid your bedroom or high traffic zones.
- Create or continue your routines: Maintain your daily routine in preparation for your workday, establish a wake-up time and a routine to support a normal working day.
- Think about natural light: Helping to maintain a positive outlook, natural light plays an important role. Try to find a spot where natural light is available.

Returning to school may not feel like it previously has. However, regardless of policies and format, it will require everyone's support to ensure our schools remain healthy, safe and equitable for students, teachers, staff and families.

COVID-19 Back to School

Back to school checklist: Beyond binders, books and backpacks

Here are a few items for the checklist that may surprise you:³

- Complete and submit all school forms, both medical and non-medical
- Ensure medical and vaccination requirements are up to date
- Have the necessary technology in place, including laptops, printers, and internet access where possible

- Create a safety kit including masks, sanitizer, gloves and other precautionary items
- Create and maintain a class contact list for parent and homework support, and
- Basic and standard school supplies
